Summary

Senior Software Engineer with 4+ years of experience specializing in backend development, API engineering, and database design using Node.js, Express.js, and PostgreSQL. Experienced in building production enterprise SaaS, ERP, and industrial IoT applications, including **300+ APIs across a 12+ module ERP platform**. Hands-on ownership across backend architecture, business logic, database design, real-time data processing, deployment, and production support. Experienced in integrating PLCs and industrial systems through MQTT, Modbus RTU, and TCP/IP. Promoted from Software Development Engineer to Software Manager while remaining hands-on with engineering, technical leadership, customer requirements, and end-to-end delivery.

Experience

YM Automation Pvt Ltd	Coimbatore, Tamil Nadu
Software Manager	Oct 2024 - Aug 2026
- Led a cross-functional software team across backend, frontend, mobile, and UI/UX while remaining hands-on with backend architecture, development, debugging, and production support. - Designed backend and database architectures for enterprise SaaS, ERP, and Industrial IoT applications, covering APIs, business logic, data models, integrations, and deployment. - Led 7-8 projects across ~10 customer companies, including multi-site industrial deployments and 24x7 IoT systems integrating PLCs through MQTT, Modbus TCP/RTU, and TCP/IP. - Managed end-to-end technical delivery including customer requirements, estimation, proposals, architecture, development planning, deployment, troubleshooting, and production support. - Conducted code reviews, mentored developers and interns, allocated technical tasks, tracked delivery, and resolved technical blockers across the team.	
Software Development Engineer	Jul 2022 - Oct 2024
- Independently designed, developed, deployed, and supported 12 production software projects, owning delivery from customer requirements through production. - Developed backend services and REST APIs using Node.js, Express.js, and PostgreSQL, implementing business logic, authentication, RBAC, data persistence, and application workflows. - Designed PostgreSQL schemas and implemented SQL queries, relationships, indexing, transactions, JSONB, and database optimization for production applications. - Developed real-time integrations with PLCs and industrial systems using MQTT, Modbus TCP/RTU, TCP/IP, TCP sockets, and polling, with typical polling intervals of ~1 second depending on requirements. - Built and supported 24x7 Industrial IoT applications for machine monitoring, production, energy, alarms, events, and analytics, integrating up to ~65 machines/devices.	

Projects

Enterprise ERP & SaaS Platform
- Designed backend architecture for a 12+ module ERP/SaaS platform covering HRMS, projects, attendance, payroll, inventory, purchase, sales, CRM, and other enterprise operations. - Developed 300+ REST APIs using Node.js and Express.js and designed a PostgreSQL data model with 100+ tables, implementing authentication, RBAC, validation, transactions, JSONB, and reusable backend patterns. - Built the platform to support 100+ companies, with 4 companies currently onboarded and approximately 300-400 employees represented in the system.
Industrial IoT Monitoring Platform
- Developed production-grade Node.js backend services for 24x7 real-time monitoring of industrial machinery and automation systems. - Integrated PLCs and machines through MQTT, Modbus TCP/RTU, TCP/IP, and TCP sockets, implementing polling, data acquisition, processing, and persistence with typical ~1-second polling intervals.

Built backend workflows and PostgreSQL data models for machine status, production data, alarms, events, and historical data, supporting systems with up to **~65 machines/devices**.

Production & Energy Monitoring System

- Designed backend services and PostgreSQL data models for real-time and historical production, energy, machine, alarm, and event data, supporting operational monitoring and analytics.
- Developed REST APIs and optimized SQL/database workflows using indexing, transactions, and efficient data-access patterns for production monitoring and reporting.

Industrial Test & Automation System

- Developed backend-driven automation systems integrating PLCs and machines through **MQTT, Modbus, TCP/IP, TCP sockets, and polling** for automated test execution and real-time data exchange.
- Implemented automated test triggering, event processing, database persistence, and REST APIs for configuration, execution, monitoring, and operational workflows.

Skills

Backend Node.js, Express.js, JavaScript, REST APIs, WebSockets, Authentication, RBAC, API Development, Business Logic	Frontend React.js, HTML5, CSS3, Axios, State Management, Responsive UI
Database PostgreSQL, SQL, Database Design, Query Optimization, Indexing, Transactions, JSONB, MongoDB	Cloud Microsoft Azure, AWS EC2, Linux, Nginx, PM2, GitHub Actions, SSL, DNS
Industrial IoT MQTT, Modbus TCP/RTU, TCP/IP, TCP Sockets, PLC Integration, Real-time Data Processing	Engineering System Architecture, Database Architecture, API Development, Performance Optimization, Authentication, RBAC, Code Review, Debugging

Education

Siddaganga Institute of Technology, Tumakuru Computer Science and Engineering	B.E. Tumakuru, Karnataka
